A: Covariance Matrix

B: Covariance matrix Eigen values and vectors

C: Sorting Eigen Vectors by Eigen Values descending

```
eigVectOrg = eigVect;
d = diag(eigVals);
[~, ind] = sort(d, 'descend');
eigVect = eigVect(:,ind)

eigVect =

    0.6962    -0.7179
    0.7179    0.6962
```

D: Mapped Data using Covariance Eigen vectors

```
mappedX = (X * eigVectOrg)
mappedX =
  -0.1238
           3.4633
   0.1284
          0.8506
   0.4396 3.6134
   0.1677
           2.9020
  -0.1368
           4.3118
   0.2286
           3.5395
  -0.3218
           2.5409
   0.3960
           1.8448
           2.1929
   0.0371
  -0.1631
           1.4119
```

E: Show the new Data is linear independent

The covariance matrix is diagonal

```
mappedS = covarianceMat(mappedX)
mappedS =
    0.0633     -0.0000
    -0.0000     1.2048
```

F: Show original Data as linear combination of new Data and Eigen Vectors

```
fprintf("\t = * eig1 + b * eig2 = (X1 X2)\n")
n = size(X,1);
for i=1:n
 fprintf("%6.3f * (%5.3f %5.3f) + %5.3f * (%5.3f %5.3f) = (%.1f
 %.1f)\n", ...
     mappedX(i,1), eigVectOrg(:,1),mappedX(i,2), eigVectOrg(:,2),
X(i,:));
 end
  a * eig1 + b * eig2 = (X1 X2)
-0.124 * (-0.718 \ 0.696) + 3.463 * (0.696 \ 0.718) = (2.5 \ 2.4)
